previous to Pace Launcher had readouts and supportive corollaries that were as easy to understand and, on the surface, simple, yet produced so many winners with as much profit.

Occasionally I'm still dismayed by a very few clients who seem to miss the point of our wagering concepts, especially from Bottom Line-Betting Line. For some unknown reason they insist on betting their top 2 numerically ranked horses from whatever readouts they use. This is not the way to do it. It defeats the very reason for advanced procedures. If a horse rates as Even and is actually going off at close to even, it is certainly not a prime WIN bet. Correlate your wagers to BOTTOM LINE as well as Betting Line. Contenders with double digit Bottom Lines win far more often than single digit ones. Top 3 SPN horses have, for all testers, won a large percent of all races. Remember, one $10 mutuel is better than two $4.80 mutuels.

For a number of years I've been writing that handicapping has changed. Old Phase III and other velocity based procedures still get winners but not the higher paying ones or the in-the-money horses that key lucrative exotics. I urged clients to accept advanced concepts that addressed the current state of handicapping.
